

H PRODUCT UPDATE

SUBJECT: COMPOSILITE® EXS 20K Axle Seat Weldment Revision

LIT No: H901

DATE: February 2026

REVISION: A

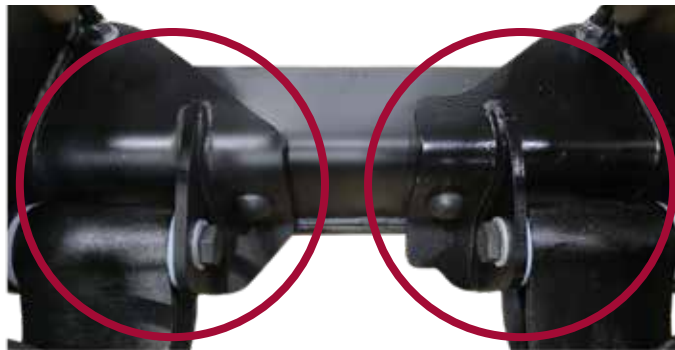

Hendrickson Auxiliary Axle Systems in Hebron, Ohio is implementing a design update to the axle seat weldment components used on COMPOSILITE® EXS 20K steerable lift axle suspensions. This revision enhances part fit-up, to further optimize efficiency and consistency in Hendrickson's manufacturing process, but does not change the fit, function, or performance of COMPOSILITE EXS 20K assemblies.

During the transition period, some lift axle suspensions may be shipped with one current axle seat weldment and one revised axle seat weldment. This combination does not affect the suspension's fit, function, or performance.

Hendrickson anticipates completing the transition to the revised axle seat weldment by March, 2026.
