

- Fully pneumatic pin-pull mechanism
- Fingertip operation
- Fast, efficient slider repositioning

Fingertip Operation

QUIK-DRAW® makes true fingertip slider pin release a reality on VANTRAAX® van and reefer slider systems and INTRAAX®-SP platform slider systems. Triggered with a simple pull of a knob, QUIK-DRAW enhances driver productivity and satisfaction. The patented QUIK-DRAW system remains the market's only completely pneumatic pin-pull mechanism delivering significant weight savings over other mechanically assisted pin-pull devices.

Fast, Efficient Slider Repositioning

When activated, QUIK-DRAW applies continuous pressure until the pins release, reducing repositioning to a one-person exercise by tapping into the trailer's air power. This saves drivers from tugging, jerking and hammering locked or jammed slider pins. As an additional security measure, pins automatically reset with the release of the emergency brake. QUIK-DRAW releases the pins in seconds to help ensure faster and more efficient slider repositioning to get rigs back on the road sooner.

QUIK-DRAW® Pin-Pull Mechanism Features and Benefits

Increases Productivity

Keeping drivers and equipment on the road increases fleets' bottom lines. QUIK-DRAW® helps save time with every slider repositioning. When activated, the system applies continuous pressure until pins are free.

Boosts Driver Efficiency and Satisfaction

With simple fingertip activation, QUIK-DRAW prevents drivers from wrestling to free locked slider pins. As an additional feature, pins automatically reset with the release of the trailer emergency brakes – a feature not available on other pin release designs

Hendrickson Durability

Valves are tested to meet stringent durability and environmental conditions – operating in temperatures to minus 40 degrees. The Hendrickson name guarantees the same high quality and proven durability you demand from our suspensions.

QUIK-DRAW Actuator

VANTRAAX® – HKA MODELS

QUIK-DRAW features linear actuators manufactured from the same rugged material as an air spring. Actuators are tucked inside the slider frame to protect from road debris.

INTRAAX®-SP – AAZ MODELS

Platform slider operators enjoy the same pin-pulling benefits as VANTRAAX users. QUIK-DRAW for sliding flats features a proven air chamber actuator with automatic reset, which fits neatly inside the slider cross member for added protection.

Actual product performance may vary depending upon vehicle configuration, operation, service and other factors.

All applications must comply with applicable Hendrickson specifications and must be approved by the respective vehicle manufacturer with the vehicle in its original, as-built configuration. Contact Hendrickson for additional details regarding specifications, applications, capacities, and operation, service and maintenance instructions.
